

High Absorbant Pads for Fresh Fish Products

Especially during fresh fish shipments (which are mostly carried by airplanes), the icy water level in the styrofoam cooler containers must be kept at a certain level. **PILPEDforFISH** is a small pad. It's measured 15x25 cm and can absorb approximately 1 liter of icy water in less than 10 minutes on its own. All of our products are produced with the permission of the Ministry of Agriculture according to the HACCP principles. Tailor made high absorbency pads can be produced for the needs of fishery industry.
